

Farmerama Podcasting Guide

MOST important thing: before start recording always record 20s at the beginning of background noise (or if you forget then do this straight away at the end).

Record any interesting noises like digging/animal noises etc.

Get phone microphone as close to mouth as possible.

Make sure person is talking over the top of the microphone NOT into it.

Stop and start and re-do things if necessary.

Leave as many gaps/pauses as possible on the recording.

Get person you are speaking to in as quiet a place as possible and get as close to them as you can.

Keep eye contact with them and get phone as close to their mouth as possible and make them feel comfortable.

Get the info like their name, their website etc.

Begin chatting and then only record focused bits that you think are interesting (i.e we don't have enough time to cover people's whole story - only a specific interesting idea or thing or project or way of doing things etc...)

Get people to include the question in the answer (i.e we will probably cut out your question).

Record with one headphone in your ear (after you've set up your phone so you can hear the recording).

Listen back to yourself.

Info on how to transfer voice memos from iphone to computer:
